Australia's most exciting new line of Eco Toy Filling

Inneregreen's' 100% corn fibre toy filling has been voted as the best toy filler on the market. The fibre is extremely soft whilst maintaining its shape and resilience. Corn fibre can be used for both soft and firm fills, the more you stuff, the firmer the feel. The fibre also holds a very low flammability rating. This is due to a high LOI index, which means the fibre requires more oxygen to ignite than any other fiber's on the market, keeping it safe for the little one's.

Naturally hypoallergenic & Anti-bacterial Machine Wash & Dry

Inneregreen's' 100% recycled PET toy fill is a cheap and easy way to stuff your latest's soft toy whilst doing you part for the environment. The fibre will perform exactly like a high-grade polyester fill, but instead of being made from virgin chemicals, the fibre is derived from recycled water bottles.

Hypoallergenic - Machine Wash & Dry
